

Artificial Intelligence and Machine Learning

Artificial Intelligence

Artificial Intelligence (AI) is a field of computer science that focuses on creating systems capable of performing tasks that normally require human intelligence.

Machine Learning

Machine Learning (ML) is a subset of Artificial Intelligence. It allows computers to learn patterns from data and make predictions or decisions without being explicitly programmed for every task.

Supervised Learning

Supervised learning is a machine learning technique in which a model learns from labelled training data. The training data contains both input features and the expected output.

Unsupervised Learning

Unsupervised learning works with data that does not have labelled outputs. The algorithm attempts to discover patterns or structures within the data.

Deep Learning

Deep learning is a subset of machine learning that uses artificial neural networks with multiple layers. It is commonly used for image recognition, natural language processing, and speech recognition.

Applications of AI

Artificial Intelligence is used in healthcare, education, finance, transportation, recommendation systems, and many other fields.
